

MIAC AUTOMATION

MIAC Automation is a prominent supplier of complete industrial automation solutions.

These include the production of electrical control panels and switchboards, the development of software for control and monitoring systems and the development of PC software for industrial IT applications.

At MIAC Automation we understand your needs, and know that automation helps to secure the long term perspective of your investments in new process equipment. All over the world increasingly stringent requirements for safety and traceability, makes automation one of the most important part of your process. MIAC Automation supplies well documented and fully functional automation systems, based on open standards and accessible platforms.

Realizing the need of a reliable panel and automation supplier in South East Asia, we have our own production of control panels, produced according to IEC 60439-1 and IEC 60 204-1 standard, under supervision of people trained and educated in Denmark.

Generating improvement, MIAC Automation is a company in constant development. We seek to be one of the market leaders in industrial automation solutions and to live up to our customers' natural demand for technological innovation and solutions that generate active improvements in the industrial processes.
